According to the total rainfall of gauges №s 1. 2 & 6 (being the nearest mountain Gauges & partly surrounding Snowdon) to the total rainfall of the Snowdon Gauges for the same period of record, and applying the ratio of the Snowdon Gauges to the total rainfall of №s 1. 2 & 6 for the year 1899, the total rainfall of the Snowdon Gauges for the year 1899 is estimated as follows:—

	Snowdon Gauges			
	№ 4	№ 7	№ 12	№ 13
Total of №s 4, 7, 12 & 13 as per № 1 gauge	150	135	152	173
" " . . . . . 2 "	146	140	157	174
" " . . . . . 6 "	150	136	157	179
Total yearly Rainfall of №s 4. 7. 12 & 13 as per the average of 1. 2 & 6	148	137	155	175

The rainfall for the year 1899 in the S. W end of the Snowdonian Range (Snowdon. Dolwyddelen & Festiniog District.) was from 10 to 15% below the average of all years. It is therefore estimated that the ~~average~~ Yearly Rainfall at that part of Snowdon where the Gauge № 13 is situated will average about 200 inches

The № of Rainy days at № 11 Gauge for 1899 was 161.

Note re. No 13:— The outlet of a small stream near this gauge had been blocked with snow, causing snow slut & water around the gauge — to rise to the height of the mouth of the gauge and fill it with water.

Note re. Nos 3. 2 & 4:— These gauges are situated above 1600 ft. elevation. During February the quantity of moisture that fell in form of snow above this elevation was so great that the cone mouth of the gauge was unable to collect all the snow — for melting afterwards to the gauge. I think that the actual quantity of moisture that fell during that month was at least ⅓ more than the quantity measured as water from the gauges, this being especially the case with No 4 at Snowdon 3300 ft elevation. This gauge was even covered with snow after 3 or 4 days of thaw. Owing to the special form of this gauge & placed deep in the ground, it seems that the water had kept liquid in it during the coldest time of the winter.

The wettest & most stormy weather of the past winter took place last Feby, at No 11. Gauge as follows:—

Feby. 9th	Snowstorm	= to .45 in water.	Wind from	S.	Force	2.	Snow dry at	Sealevel
